

# How to Use Message Translation

*Message translation allows you to translate messages to your base language.*

## 1. Click on a message

After you click on a message, it will be marked with a purple box, and you will see blue lines appear under each word in the message. You can select several messages at a time if you need to.

## 2. Click on the translation icon

On the toolbar at the top of the screen, click on the translation icon. The message(s) you have selected will be translated to your base language.

*\*Message Translation can be disabled for a class in Class Settings. It can also be disabled for an individual user in Learning Settings; however, Class Settings will override individual user settings in a class space.*
